

# Sweet Seeds®

Feminized Seeds

## A SWEET WORLD

sweetseeds.com     

English  
2023

We enter this new season with a renewed sense of illusion, reinvigorated enthusiasm, and new strains! But above all, we have an excellent network of physical and online grow shops that have chosen Sweet Seeds® as their partner. We are honored to support everyone who has had to struggle through a very difficult 2022 and are still striving to keep our sector as alive and kicking as ever. Here at Sweet Seeds® we are still campaigning for the legalization of the consumption and cultivation of our ancestral plant.

And we'd like to thank you, from the long-term collector of Sweet Seeds® genetics to those who are choosing our seeds for the first time, we thank you sincerely for being our driving force. This year, we hope you get the chance to enjoy our six new strains, as they are all authentic explosions of aroma and flavor. Let's start with the photoperiod-dependent strains.

First up is **Sweet Mandarin Zkittlez F1 Fast Version® (SWS105)**: A vigorous, photoperiod-dependent hybrid strain with extremely resinous, potent, and aromatic buds. Our second new strain is **Strawberry Cola Sherbert F1 Fast Version® (SWS106)**: An ultra-fast flowering, photoperiod-dependent strain with red flowers. It is an indica/sativa polyhybrid, although predominantly indica.

Now let's look at the new autoflowering strains.

Firstly, **Mimosa Bruce Banner XL Auto® (SWS101)**: Two excellent strains with a US heritage that have been crossed and stabilized to produce these extra-large autoflowering plants. And we're sure you'll fall in love with the next new strain: **Sweet Mandarin Zkittlez XL Auto® (SWS102)**, as it produces extra-large plants with a delicious, highly spiced, Sour Diesel aroma. With a happy, energetic effect. The third novel autoflowering strain is going to triumph: **Orange Apricot Glue XL Auto® (SWS103)** is a cross of Orange Apricot x MAC with our very own famous Gorilla Girl XL Auto® (SWS82) that is easily worthy of the most discerning collectors. And lastly, our novel autoflowering red, whose beauty and quality have left us speechless: **Red Mimosa XL Auto® (SWS104)**. This strain has top genetics. With a mainly indica character, it has good yields of dense, compact buds.

And most importantly, all our new strains have a feminization rate of around 99.9% and germination rate of over 95%. And for yet another year, we shall continue to give you 1 or 2 seeds free, of the same strain and quality, with each pack of 3 or 5 seeds, respectively.

We hope you have a sweet, exquisite year collecting genetics.

Thanks for choosing us!

From the Sweet Seeds® team

**Autoflowering (aka automatic):** Varieties that start flowering when they reach to a specific lifetime, regardless of the hours of light that they receive.

**3G, 4G, 5G, 6G... (in autoflowering):** Identifies the generational steps and not the generations themselves. We established a new generational step every time the presence of Cannabis Ruderalis genetic in the autoflowering varieties is reduced. It is usually due to the cross with photoperiod-dependent genetics.

**Photoperiod Dependent:** Varieties that flower depending on the number of hours of light that they receive. **F1 hybrid:** The first resulting generation of the hybridization between two different and stable varieties. **S1:** First resulting generation from the self-pollination of an individual. **S2:** Second generation of self-pollination.

**The Red Family:** Family group of strains from the Sweet Seeds® catalog that develops purple or reddish tones.

**F1 Fast Version®:** Photoperiod-dependent varieties with fast flowering. F1 hybrids between photoperiod-dependent and autoflowering varieties.

# The Red family

We present you our exclusive collection of red-flowered strains. A family of outstandingly beautiful plants in which the buds acquire reddish, purple and even bluish tones when they achieve maturity. The purple tones shown by the plants during flowering is induced by their abundance in anthocyanins, or anthocyanins, which are hydrosoluble pigments present in the vegetal cells. The flavonoids in general, and the anthocyanins in particular, have important pharmacological and therapeutic properties. Among other properties they are antioxidant, anti-allergic, antibiotic, anti-inflammatory, neuroprotective, etc. The plants acquire these tones in the buds during flowering and some specimens also get these tones in the leaves in that phase of their life cycle. Once harvested and dried, the buds acquire a very dark purple-reddish tone, almost black.

## Dark Devil Auto®

**Variety SWS38**

**Indica:** 40,3% / **Sativa:** 55% / **Ruderalis:** 4,7%

**Indoor/Outdoor Harvest:**

8½ weeks from germination

**Height:** 80-130 cm

**Purple Flower:** approximately 95% of the specimens

Autoflowering strain. This is the result of the hybridization between one of our most appreciated autoflowering genetics, the incredible Big Devil XL Auto® (SWS28), and an exotic autoflowering strain with purple flowers. The purple characteristic of this strain is inherited from its ancestors from the Chitral region in the Pakistani Hindu Kush, very close to Afghanistan, and contributes for a faster flowering period while bringing sweet aromas and purple colors. Dark Devil Auto® (SWS38) shows a strong hybrid vigor from germination. Plants grow with the appearance of indica-sativa hybrids, with a strong central stem, numerous side branches and a big main cola. Resin production is abundant both in the flowers and their surrounding leaves. Sweet and fruity aroma with incense hints and delightful citrus tones.

3+1s 30,00 €

5+2s 50,00 €

## Red Mimosa XL Auto®

An autoflowering, red-flowered, and feminized version of our Sweet Mimosa XL Auto® (SWS94). This strain was developed through the hybridization and subsequent stabilization of strains selected from our Sweet Mimosa XL Auto® and red-flowering Red Strawberry Banana Auto® (SWS90) families. This is an extra-large, autoflowering strain with excellent yields, resin-loaded buds, and a great aroma. It has a primarily indica character, so it produces dense, highly compact, resinous buds. Red Mimosa XL Auto® (SWS104) has an intense sweet, fruity aroma of Mimosa oranges with hints of nuts (walnuts), rocket salad and ground pepper. It has a lively, relaxing effect, while also stimulating the imagination, communication skills, and creativity.

## Bloody Skunk Auto®

### Variety SWS44

**Indica:** 62,4% / **Sativa:** 32,9% / **Ruderalis:** 4,7%

**Indoor/Outdoor Harvest:** 8 weeks from germination

**Height:** 60-110 cm

**Purple Flower:** approximately 95% of the specimens

Autoflowering strain. This strain is the result of a cross between our Sweet Skunk Auto® (SWS34) and a selected genetic line of Red Poison Auto® (SWS39) that contributes with the purple flowered feature. The result is a marvelous and aromatic purple flowered strain featuring a deep Skunk aroma, extremely pleasant and sweet. The structure of the plant is very similar to the classic Skunk strains, with the shape of a fir and lots of side branches. Large flowers covered with aromatic resin and a huge main cola on top. The flower clusters are very dense and in the course of flowering they get completely covered in resin.

## Red Poison Auto®

### Variety SWS39

**Indica:** 76,9% / **Sativa:** 20% / **Ruderalis:** 3,1%

**Indoor/Outdoor Harvest:** 8 weeks from germination

**Height:** 60-120 cm

**Purple Flower:** approximately 95% of the specimens

Autoflowering strain. Hybridization between one of the most appreciated strains from our catalog, the amazing Green Poison® (SWS14), and an exotic purple flowered autoflowering strain, descending from Pakistani Kush ancestors. Red Poison Auto® (SWS39) grows with the appearance of an indica-sativa hybrid. It shows great hybrid vigor from the first stages of growth. The plants develop a strong main stem and long flexible side branches. This strain produces thick dense buds covered with aromatic resin. Taste and aroma are both very pleasant and intense. Sweet and fruity with a soft Skunk background.

## Tropicanna Poison XL Auto®

The autoflowering, red-flowered, feminized version of our Tropicanna Poison F1 Fast Version® (SWS85). Contains genetic material from one of the most famous “Super Strong” Cookies strains in the US, no less than Tropicanna Cookies (Girl Scout Cookies x Tangie). It is the outcome of crossing an elite, selected Tropicanna Cookies clone, which contains a red flower phenotype, and our much-loved autoflowering strain Red Poison Auto® (SWS39). The plants produce high yields with resinous buds, THC levels of up to 24% and elevated terpene levels. The buds have an excellent aroma and taste, remarkably sweet, intense and heavy, with tones of mango, earthy, wooden hints, and a subtle Skunk background.

**3+1s** 28,00 € **5+2s** 46,00 €

This “pure CBD” autoflowering strain is notable for its red flowers, very low THC levels (0,4-0,5%) and high CBD content (15-17%). It is a cross between two of our own strains: Sweet Pure CBD® (SWS65) and Red Poison Auto® (SWS39). It looks like most other indica plants with a large central bud, short side branches, a strong stem and plenty of resin. The strain offers a sweet, earthy aroma and taste, with shades of fresh pine or cypress and hints of fruits of the forest. It has a relaxing effect that washes away anxiety, which makes it ideal for medicinal users who do not want to feel any psychotropic effects from the THC.

## Black Cream Auto®

**Variety SWS37**  
**Indica:** 91,9% / **Sativa:** 5%  
**Ruderalis:** 3,1%  
**Indoor/Outdoor Harvest:**

Autoflowering strain. This is the result of the cross between our most awarded strain, the original Cream Caramel® (SWS04), and an exotic purple flowered autoflowering strain, descending from Pakistani Kush ancestors. This plant looks like an indica strain, with a short internodal distance, numerous small branches in the main stem, compact buds and a big main cola. This strain is a great resin producer. The aroma of Black Cream Auto® (SWS37) is very sweet and fruity, with a background that features outstanding earthy tones inherited from our Cream Caramel®.

**3+1s** 28,00 € **5+2s** 46,00 €

Autoflowering strain. This polihybrid is the result from the crossing of two selected strain of our purple flowered varieties: Dark Devil Auto® (SWS38) and Black Cream Auto® (SWS37). This strain shows a great hybrid vigor since germination, developing the typical structure of an indica-sativa hybrid, with a strong main stem, surrounded by multiple buds on the side branches also with a good caliber and density. Tall-stemmed autoflowering strain. Some specimens can reach one meter in height, all this in just two months from the germination of the seeds. The aroma is sweet and fruity with hints of incense and lemony citrus tones. The plants produce copious amounts of aromatic resin with a powerful and exciting effect.

## Red Gorilla Girl XL Auto®

**Variety SWS89**

**Indica:** 52,3% / **Sativa:** 45,2% / **Ruderalis:** 2,5%

**Indoor/Outdoor Harvest:** 8-9 weeks from germination

**Height:** 60-120 cm

**Purple Flower:** approximately 85% of the specimens

A red-flowered, extra tall, autoflowering version of our cherished “Super Strong” strain Gorilla Girl® (SWS74). The outcome of a cross between our Gorilla Girl XL Auto® (SWS82) [Gorilla Girl® x Sweet Gelato Auto® (SWS76)] and our autoflowering strain known for its purple flowers, Bloody Skunk Auto® (SWS44). It has a potent, stimulating effect thanks to its very high THC levels of up to 21%, or even greater in some individual plants. The Red Gorilla Girl XL Auto® (SWS89) has an intense sweet, spicy aroma and taste, with hints of lemon and fresh cypress. It produces dense and highly resinous buds that are ready for harvesting just 9 weeks after the first leaf appears. Approximately 85% of the plants grow with purple flowers.

## Red Strawberry Banana Auto®

**Variety SWS90**

**Indica:** 73,5% / **Sativa:** 25% / **Ruderalis:** 1,5%

**Indoor/Outdoor Harvest:** 8 weeks from germination

**Height:** 50-110 cm

**Purple Flower:** approximately 75% of the specimens

This autoflowering strain emanates from a cross of an elite Strawberry Banana clone with specially selected plants from our Red Poison Auto® (SWS39) autoflowering strain known for its purple flowers. The plants follow a mainly indica growth pattern and produce compact red buds covered with an abundance of trichomes. Red Strawberry Banana Auto® (SWS90) is excellent for high-quality, aromatic resin extractions with purple, pink or reddish hues. Around 75% of plants develop purple flowers. This strain has an intense sweet, fruity aroma that conjures up memories of fruit-flavoured candies with hints of walnuts and rocket salad leaves. It flowers very quickly and mature buds can be harvested just 7-8 weeks after the appearance of the cotyledons. The buds have a relaxing effect and help boost the imagination and creativity.

## Red Hot Cookies®

Top-quality genetic as a result of crossing a clone of an American “Super Strong” Cookie strain – Tropicanna Cookies – with a clone selected from a second American strain, the potent mandarin-scented Tangie (Girl Scout Cookies x Tangie). We chose exotic lineages with red flower phenotypes when crossing these two varieties. The red flowers develop in around 60% of the offspring and tend to appear in the last few weeks of flowering, beginning with the lower branches and flowers before spreading to the top of the plant. Red Hot Cookies® (SWS83) is a “Super Strong”, highly productive and resinous strain with high THC levels of up to 25%. It has an excellent scent and taste; it is sweet, deep and dense, with marked tones of mandarin and mango, plus hints of fruits of the forest.

## Strawberry Cola Sherbet F1 Fast Version®

This is an ultra-fast flowering, photoperiod-dependent, feminized strain with red flowers. It is also a first filial generation (F1) cross between a photoperiod-dependent elite clone of the famous Californian Sunset Sherbet and the autoflowering strain Strawberry Cola Auto. Strawberry Cola Sherbet F1 Fast Version® (SWS106) is an indica/sativa polyhybrid, although it is predominantly indica. The plants have large, dense buds covered with lots of highly aromatic resin. This strain has a very pleasant, potent, and complex aroma, with shades of red fruits and cola, earthy and woody hints, and fresh, citrus undertones. It has a happy, relaxing effect that stimulates reflective introspection, concentration, and insight.

## Red Mandarin F1 Fast Version®

Our first red-flowered photoperiod-dependent strain. This is the resulting hybrid from the cross between our Red Poison Auto® (SWS39) and a photoperiod-dependent elite clone of Tangie (California Orange x Skunk hybrid) from a rare and unusual purple-flowered phenotype, with a sensational intense mandarine taste and aroma. This strain develops resinous and productive buds with beautiful red flowers that are ready to harvest in just 7-8 weeks. The aroma of Red Mandarin F1 Fast Version® (SWS79) is probably the most exquisite among all the red-flowered strains in the market, featuring a powerful sweet and mandarine citrus aroma with fresh hints of blue cypress. An ideal plant for top quality highly aromatic extractions with a gorgeous appearance for the reddish and rosy tones of its resin.

## Tropicanna Poison F1 Fast Version®

These plants, with red flowers and ultrafast flowering, are a photoperiod-dependent, feminized version of one of the most famous varieties in the US “Super Strong” Cookies family, Tropicanna Cookies (Girl Scout Cookies x Tangie). It is the cross of an elite, selected Tropicanna Cookies clone, with a red flower phenotype, and our highly regarded, red flower, autoflowering strain Red Poison Auto® (SWS39). The plants are very productive and resinous, with THC levels of up to 24% and extremely high terpene levels. The buds have an excellent aroma and taste; they are very sweet, intense and dense, with tones of mango, earthy, wooden hints, and a subtle Skunk background.

## Mimosa Bruce Banner XL Auto®

An 8<sup>th</sup> Generation autoflowering strain. The stable hybridization of two excellent strains developed from US genetics. The product of crossing a specially selected very aromatic and resinous elite clone from the popular Mimosa family [Clementine (Tangie x Lemon Skunk) x Purple Punch (Larry OG x Grand Daddy Purple)] with our own Bruce Banner Auto® (SWS91). Mimosa Bruce Banner XL Auto® (SWS101) is an extra-large autoflowering strain with highly resinous and aromatic buds. These plants have a truly exquisite scent that is particularly sweet and attractive, with shades of citrus fruits reminiscent of mandarin and strawberry, fresh cypress, and pleasant undertones of smoked cheese. It has a potent, happy, even euphoric, and long-lasting effect that enhances the imagination and creativity. Some plants develop flowers and leaves with purple and reddish hues at the end of the flowering period.

## Orange Apricot Glue XL Auto®

A 7<sup>th</sup> Generation autoflowering strain. This strain is a cross of a resinous, aromatic Orange Apricot x MAC elite clone with our very own Gorilla Girl XL Auto® (SWS82). The outcome is an extra-large autoflowering strain with highly resinous, potent, and aromatic buds that meet the expectations of even the most demanding collectors. The plants have a sweet, fruity aroma that includes spicy, citric tones and a fresh, earthy scent. They yield dense, sticky buds that are coated with copious amounts of resin. Orange Apricot Glue XL Auto® (SWS103) has a well-balanced effect that is both euphoric and yet relaxing, while it also helps boost creativity, communication, and concentration levels. Some plants develop flowers and leaves with purple and reddish hues at the end of the flowering period.

**Indoor/Outdoor Harvest:** 7 weeks from germination

**Height:** 50-90 cm

3<sup>rd</sup> Generation autoflowering strain. This hybrid is the result of crossing an autoflowering Critical Mass genetic line from the Sweet Seeds® R&D Department, chosen for its fast flowering and pleasant intense aroma, with a selected strain of very fast flowering, our Speed Devil #2 Auto® (SWS25). This autoflowering strain has been developed through the search for the genetic traits responsible for very fast flowering. The final result is a strain that is ready to harvest only 7 weeks after germination. It produces thick buds covered with aromatic resin. Sweet and fruity aromas with hints of yeast and cheese.

## Sweet Mandarin Zkittlez XL Auto®

One of our 5<sup>th</sup> Generation autoflowering strains. The result of crossing an elite clone of Zkittlez (very potent, resinous and with a strong orange and mandarin citrus aroma akin to Sour Diesel) and our Sweet Mimosa XL Auto® (SWS94), which also emits a scent with hints of orange and mandarin. The final product is a vigorous, extra-large autoflowering strain with highly resinous, potent, and aromatic buds. This strain has a delicious aroma, with spicy shades of Sour Diesel, orange and mango, plus woody undertones and subtle hints of pine and freshly cut grass. Some plants develop flowers and leaves with purple and reddish hues at the end of the flowering period. Sweet Mandarin Zkittlez XL Auto® (SWS102) has an energetic, cheerful effect that stimulates the imagination and creativity.

## Green Poison XL Auto®

Variety SWS71

**Indica:** 56,9% / **Sativa:** 40% / **Ruderalis:** 3,1%

**Indoor/Outdoor Harvest:** 8 weeks from germination

**Height:** 80-125 cm

3<sup>rd</sup> Generation autoflowering strain. Tall-stemmed version of one of our most appreciated autoflowering strains: Green Poison Auto® (SWS30). Green Poison XL Auto® (SWS71) was developed within a recurrent selection program of tall-stemmed Green Poison Auto® specimens across multiple generations. These seeds produce plants that height around 25% more than their ancestors, with a higher flower and resin production. The tastes and aromas of this strain are very pleasant and intense, with sweet and fruity tones, a sweet Skunk background and hints that are reminiscent of rucola and walnuts.

## Crystal Candy XL Auto®

Variety SWS87

**Indica:** 60% / **Sativa:** 38,4% / **Ruderalis:** 1,6%

**Indoor/Outdoor Harvest:** 8 weeks from germination

**Height:** 90-140 cm

A tall, 4<sup>th</sup> Generation autoflowering strain. It is produced by selecting and crossing tall examples of our Crystal Candy Auto® plants (SWS61). The genetics have been developed as part of a special programme within the Sweet Seeds® R&D Department designed to discover interesting, exquisite and subtly sweet aromas that evoke an olfactory sensation of sweet shops. The buds have a very sweet, fruity scent with aromatic tones of bubble gum and jelly beans, complemented by shades of acidic strawberries and ripe melons. This strain produces large amounts of aromatic resin crystals and beautiful buds. The plants easily grow over 1 metre tall.

## Cream Mandarinine XL Auto®

Tall-stemmed autoflowering strain. This high yielding 4<sup>th</sup> Generation autoflowering strain is the resulting hybrid from the cross between selected specimens of our Cream Mandarinine Auto® (SWS29) and a Super Tai'98 elite clone. The genetic coming from the Super Tai'98 elite clone contributes with interesting sativa characteristics to this hybrid, such as bigger size, but also subtle aromatic and spicy tones with hints of wood and nuts. The so much appreciated Cream Mandarinine Auto® genetic contributes with traits from the indica side, such as high flower and resin production, but also sweet and fresh aromas with tones of citric fruits of the mandarin orange type.

## Runtz XL Auto®

### Variety SWS88

**Indica:** 47,1% / **Sativa:** 52,5% / **Ruderalis:** 0,4%

**Indoor/Outdoor Harvest:** 8 weeks from germination

**Height:** 60-120 cm

A 6<sup>th</sup> Generation autoflowering strain. This is our extra large, autoflowering version derived from the Runtz genetic line (Zkittlez x Gelato). The strain is notable for its delicious aroma, strong effects and high yields. The Runtz strain has revolutionized the Californian marijuana scene and it is one of the most aromatic and potent genotypes on the West Coast of the USA. Runtz XL Auto® is the product of crossing a carefully selected Runtz clone with handpicked individuals from our Sweet Gelato Auto® (SWS76) strain. It contains high terpene concentrations, which lends the buds their very intense, delightfully sweet and fruity bouquet. It has a short life cycle, with just 8 weeks from the appearance of the cotyledons until harvest. Its effect is powerful and well-balanced, producing peaceful, relaxing vibes, while stimulating creativity and the imagination.

## Strawberry Banana Gelato XL Auto®

### Variety SWS99

**Indica:** 57,1% / **Sativa:** 42,5% / **Ruderalis:** 0,4%

**Indoor/Outdoor Harvest:** 8 weeks from germination

**Height:** 60-125 cm

A 6<sup>th</sup> Generation autoflowering strain. It is the outcome of crossing an elite Strawberry Banana clone [Crockett's Banana Kush x Bubblegum (strawberry phenotype)] and select individuals from our Sweet Gelato Auto® (SWS76) strain. The plants have an exquisite, potent aroma, which is both fruity and sweet, with tones of strawberry chewing gum, OG Kush, wood and rocket salad leaves. This strain flowers quickly, producing lots of resin-laden buds. It has a high THC content thanks to its compact buds covered with large trichomes.

3+1s 28,00 €

5+2s 46,00 €

## Gorilla Girl XL Auto®

A 6<sup>th</sup> Generation autoflowering strain. A tall, “Super Strong” marijuana strain produced by crossing two of most powerful varieties in the Cookies family: Gorilla Girl® x Sweet Gelato Auto® (SWS74 x SWS76). It has a potent, stimulating effect with very high THC levels of up to 25%. Individual plants can even surpass this threshold. The buds have an intense, sweet and fruity aroma and taste, with tones of blue cypress and wood complemented by citric, earthy shades. The plants’ buds are heavily loaded with resin, have long trichomes and very large flower calyxes. This strain is known for its exuberant resin production which completely coats the calyxes with aromatic trichomes.

## Purple Punch OG XL Auto®

**Variety SWS96**

**Indica:** 71,5% / **Sativa:** 27,7% / **Ruderalis:** 0,8%

**Indoor/Outdoor Harvest:** 8 weeks from germination

**Height:** 60-120 cm

One of our 5<sup>th</sup> Generation autoflowering strains. This is the autoflowering version of our Purple Punch OG® (SWS93) strain. It is the outcome of crossing an elite, selected clone of Purple Punch OG® [Purple Punch (Larry OG x Grand Daddy Purple) x Star Killer (Skywalker OG Kush x Rare Dankness #2)] and our popular autoflowering strain Killer Kush Auto® (SWS56). They yield plants with juicy buds covered in strikingly aromatic resin. Purple Punch OG XL Auto® (SWS96) plants have a very high terpene content, making them ideal for resin extractions. They have a deliciously sweet, complex aroma and flavour, with strong, spicy tones of OG Kush. The effect is intense, but relaxing. Thanks to the strain's Grand Daddy Purple ancestry, some plants are notable for purple or reddish hues in their leaves and flowers.

**Variety SWS97**

**Indica:** 63,5% / **Sativa:** 36,3% / **Ruderalis:** 0,2%

**Indoor/Outdoor Harvest:** 8 weeks from germination

**Height:** 60-120 cm

A 7<sup>th</sup> Generation autoflowering strain. This is our autoflowering version of Skywalker OG (OG Kush x Skywalker), which is mainly indica, gives high yields and is a US West Coast favourite; in summary, an OG Kush strain with excellent performance. We have incorporated autoflowering genes from one of our own strains, the Runtz XL Auto® (SWS88) [Runtz (Zkittlez x Gelato) x Sweet Gelato Auto® (SWS76)]. The end result is very productive, resinous, aromatic plants that are perfect for extracting resin and concentrates. The plants have an intense aroma and flavour, combining sweet, fruity tones with earthy, spicy shades of blue cypress, all reminiscent of the Diesel and OG Kush families but with a sweeter undertone.

## Sweet Amnesia Haze XL Auto®

Variety SWS57

**Indica:** 24,4% / **Sativa:** 74% / **Ruderalis:** 1,6%

**Indoor/Outdoor Harvest:** 8-9 weeks from germination

**Height:** 60-120 cm

A 4<sup>th</sup> Generation autoflowering strain. We have used the famous Amnesia Haze clone known as “Cordobesa” to develop this strain. The autoflowering genetics were introduced from selected strains of our S.A.D. Sweet Afgani Delicious Auto® (SWS24), which lends this particular cross its sweet, musky undertone. The strain has a very pleasant, yet complex and deep, aroma of incense, with sweet, pungent shades, and hints of lemon, wood and nuts. It is an extremely productive, tall, autoflowering strain with highly resinous buds.

## Sweet Mimosa XL Auto®

Variety SWS94

**Indica:** 45% / **Sativa:** 53,4% / **Ruderalis:** 1,6%

**Indoor/Outdoor Harvest:** 9 weeks from germination

**Height:** 60-130 cm

A 4<sup>th</sup> Generation autoflowering strain. Autoflowering version of the Mimosa strain [Clementine (Tangie x Lemon Skunk) x Purple Punch (Larry OG x Grand Daddy Purple)] that combines some of the latest and most popular strains from the US. We have introduced genes from our very own Cream Mandarin Auto® (SWS29) to introduce the autoflowering properties. The resulting cross still has the same characteristic aroma and flavour of Mimosa, with earthy shades and citric tones of orange and mandarin, and some plants develop purple and reddish flowers and leaves at the end of flowering. It is also a high-production strain with large, resin-soaked buds. Sweet Mimosa XL Auto® (SWS94) has a lively, cheerful effect and stimulates the imagination and creativity.

## Cream Caramel Auto®

3<sup>rd</sup> Generation autoflowering strain. Autoflowering version of our Cream Caramel® (SWS04). Result of the cross between our best 2<sup>nd</sup> Generation autoflowering strains with our Cream Caramel®. Autoflowering with great hybrid vigor, short internodal distance and good development of side branches. The plants feature abundant production of dense and sticky resin that gets harder with the buds drying process. This high-quality autoflowering strain features very dense buds with pungent sweet aroma with earthy tones, fast flowering and strong effect. Genetics such as Cream Caramel Auto® (SWS22) were the foundation for the re-evolution of the autoflowering strains. At the end of flowering the plants reach the same resinous and appetizing appearance as their photoperiod-dependent sisters.

F1 Fast Version®

Photoperiod dependent

CBD

## Ultra-fast flowering feminized seeds

F1 Fast Version® strains are photoperiod-dependent versions with an ultra-fast flowering of some of the most appreciated strains from the Sweet Seeds® catalog. These new genetics are F1 hybrids between elite clones of our photoperiod-dependent strains and our best selection of autoflowering strains. The autoflowering genetics contribute for a significant shortening in the flowering and maturation time frame of the F1 hybrid. This means that when grown indoors the plants are ready to be harvested only 6 or 7 weeks after changing the light cycle to 12 hours of light and 12 hours of darkness. In outdoor grows the plants shorten the harvest

time in 1 or 2 weeks comparing with their original versions. Due to their fast flowering, these varieties are highly appropriate for humid climates where plants usually get more vulnerable to mold, as they manage to anticipate harvest to the most virulent botrytis known for decimating the buds of longer flowering indicas.

**Early harvest**

**Resistant in humid areas**

**Great hybrid vigor**

## Sweet Skunk F1 Fast Version®

**Variety SWS54**

**Indica:** 65% / **Sativa:** 35%

**Indoor Blooming:** 6-7 weeks

**Outdoor Harvest:** late August to early September

Feminized and photoperiod-dependent version with an ultra-fast flowering of one of the most famous cannabis families of all time, considered nowadays as a classic of cannabis breeding. This strain is the result of the hybridization between a selected genetic line of our Sweet Skunk Auto® (SWS34) and our Early Skunk elite clone. The F1 hybrid resulting from the cross between the autoflowering and the photoperiod-dependent strains originates a photoperiod-dependent Skunk genetic that features very fast flowering. The aroma of this strain is very sweet and spicy, just like the classic aroma that we usually find within the Skunk family. This strain produces thick buds, loaded with abundant and aromatic resin.

**3+1s** 20,00 €    **5+2s** 33,00 €

## Sweet Mandarin Zkittlez F1 Fast Version®

This is an ultra-fast flowering, photoperiod-dependent, feminized strain. It is a first filial generation (F1) strain created by crossing an elite clone of Zkittlez (very potent, resinous and with a strong orange and mandarin citrus aroma akin to Sour Diesel) and our Sweet Mimosa XL Auto® (SWS94), which also emits a scent with hints of orange and mandarin. The result is a vigorous, photoperiod-dependent hybrid strain with very resinous, potent, and aromatic buds. This strain has a delicious aroma, with spicy shades of Sour Diesel, orange and mango, plus woody undertones and subtle hints of pine and freshly cut grass. Some plants develop flowers and leaves with purple and reddish hues at the end of the flowering period. Sweet Mandarin Zkittlez F1 Fast Version® (SWS105) has an energetic, cheerful effect that stimulates the imagination and creativity.

## Sweet Cheese F1 Fast Version®

**Variety SWS42**

**Indica:** 40% / **Sativa:** 60%

**Indoor Blooming:** 7-8 weeks

**Outdoor Harvest:** late August to early September

Feminized and photoperiod-dependent version of our Sweet Cheese® (SWS19) now featuring ultra-fast flowering. This strain is the F1 hybrid resulting from the cross between a selected Sweet Cheese® elite clone and a selected 3<sup>rd</sup> Generation autoflowering genetic line of Sweet Cheese Auto® (SWS33). This version of Sweet Cheese® preserves the traditional and desired matured spicy cheese aroma from the Cheese genetics. It produces long thick buds, which are quite dense and totally covered with very aromatic and crystalline trichomes. The F1 cross brings more homogeneity and hybrid vigor to the offspring. The cross with the autoflowering genetic shortens the flowering and maturity time of this strain in several weeks.

## Crystal Candy F1 Fast Version®

**Variety SWS73**

**Indica:** 60% / **Sativa:** 40%

**Indoor Blooming:** 6-7 weeks

**Outdoor Harvest:** late August to early September

Fast flowering photoperiod-dependent version of one of the tastiest strains from the Sweet Seeds® catalog, Crystal Candy® (SWS58), awarded with the 1<sup>st</sup> Prize for the Best Indica at Spannabis Champions Cup 2017. Crystal Candy F1 Fast Version® (SWS73) is the resulting hybrid from the cross between our Crystal Candy® and a selected genetic line of Sweet Special Auto® (SWS35). This version features the curious and exquisite sweet aroma, reminiscent of strawberry chewing gum or candy shop, that turned the original Crystal Candy® into an extremely appreciated strain. This strain is a prominent high producer of big aromatic resin crystals that totally cover the flowers and their surrounding leaves with a high density of large big-headed trichomes. It is possible to obtain extractions of exquisite quality and incredibly pleasant aroma from the buds of this plant.

## Green Poison F1 Fast Version®

Feminized and photoperiod-dependent version of our Green Poison® (SWS14) now featuring ultra-fast flowering. This is an F1 hybrid resulting from the cross between the elite clone of our appreciated Green Poison® and a selected 3<sup>rd</sup> Generation autoflowering genetic line of Green Poison Auto® (SWS30). This strain is ready to harvest with thick buds all covered with abundant aromatic resin only 6 weeks after the flowering photoperiod begins. The plants have the appearance of indica-sativa hybrids, with an exceptionally vigorous growth, very fast flowering and large production of flowers. Exquisite taste and aroma with a sweet intense hint of fruit. This strain is remarkably resistant to mold in outdoor grows, considering that due to its fast flowering the plant succeeds in anticipating its harvest to the period in which botrytis usually attacks.

Zkittlez is one of the most famous and potent strains found on the west coast of the USA. Sweet Zenzation® (SWS84) derives from a cross between an elite clone of Zkittlez combined with a specially selected Grape Ape clone, which is one of the strains used to develop the original Zkittlez. The result is a predominantly indica genetic hybrid. It produces a large amount of resin-soaked flowers. It is both relaxing and stress-relieving, yet it also stimulates the imagination and conversation, an effect that is normally associated with sativa strains. The flowers have a high terpene content, an exquisite aroma and sweet taste, with hints of fruit-flavoured candies, hardwood undertones, shades of lemon, cypress and subtle aromatic peppers.

**3+1s** 36,00 € **5+2s** 60,00 €

Excellent hybridization between two of our best elite clones coming from the USA. In the cross takes part a selected clone of San Fernando Valley OG Kush, characterized by a pleasant and complex scent, with strong presence of the lemony aroma coming from the Lemon Thai that takes part in the original OG Kush cross. The other elite clone that is involved in the cross is a Kosher Kush, another OG Kush genetic very appreciated in Los Angeles and nearby areas (California). Very pleasant and intense aroma with original lemony tones of OG Kush and hints of solvent, notes of spices, wood and blue cypress. The plants look like indica-sativa hybrids leaning to the sativa side. These American varieties with strong presence of the limonene terpene are highly appreciated in the USA for cannabic extractions.

**3+1s** 36,00 € **5+2s** 60,00 €

This strain was developed from a NYC Diesel line. Extremely potent, this high yielder has a rare and super-strong exotic aroma. A wonderful plant with appearance and bud growth from the indica side, featuring an euphoric high that allows us to discover the cocktail of sativas present in its broad-based gene pool. The resin production is exuberant, featuring a psychedelic long-lasting high.

## Gorilla Girl®

This strain is the resulting hybrid from the cross between two of the most famous and powerful genetics coming from the USA: Gorilla Glue X Girl Scout Cookies. The GSC specimen used for this cross comes from the phenotype known as "Thin Mint". An indica-sativa hybrid with sativa predominance. Gorilla Girl® (SWS74) is a strain with a very powerful effect, featuring very high THC levels that can reach to between 20% and 31% in optimum growing conditions. Some specimens can even exceed these levels. The resin production of this strain is copious, covering all the flower calyxes with aromatic trichomes. The buds are very resinous and compact. Gorilla Girl® features intense taste and aroma, with cypress tones and a touch of wood, complemented with hints of earth and citrus. The plants look like balanced indica-sativa hybrids, very productive and vigorous, with long and flexible side branches.

## Purple Punch OG®

This strain is hybrid produced from an elite Purple Punch (Larry OG x Grand Daddy Purple) clone with an elite clone of Star Killer (Skywalker OG Kush x Rare Dankness #2) - two champion genotypes of renowned prestige in the international cannabis scene. It is a mainly indica strain with a compact structure featuring a large main bud and strong side branches. The buds are thick and laden with masses of highly aromatic resin. They are characterized by very high terpene concentrations making them ideal for resin extractions. Given the strain's Grand Daddy Purple ancestry, some plants are notable for purple or reddish hues in their leaves and flowers. They have a deliciously sweet, complex aroma and flavour, with very spicy tones of OG Kush and shades of lemon. The plants produce an intense, relaxing effect.

**Outdoor Harvest:** late September

The first "CBD-pure" cannabis strain from Sweet Seeds®, with very low levels of THC, generally under 1%, and high levels of cannabidiol (CBD), specially designed to satisfy the needs of therapeutic cannabis users who prefer to avoid the psychoactive effects of THC. Sweet Pure CBD® (SWS65) features a THC:CBD ratio of between 1:15 and 1:20, with levels of THC standing between 0,4% and 1% and CBD levels of around 8-15%. Such low levels of THC and high CBD turn our Sweet Pure CBD® into a cannabis plant with imperceptible psychotropic effects. With these high levels of CBD, therapeutic cannabis users can get an extra benefit from the medicinal properties of CBD. This strain is the result of two generations of autopolllination (S2) of a CBD-rich clone with ancestors from the Diesel family. The aroma of this strain is sweet and fruity, with mandarin citrus tones and soft fresh hints of cypress. The plants present indica-sativa hybrid structure with sativa predominance.

## Chem Beyond Diesel®, C.B.D.

**Variety SWS66**  
**Indica:** 55% / **Sativa:** 45%  
**THC:CBD Ratio:** (1:1-1:2)  
**Indoor Blooming:**  
 8 weeks  
**Outdoor Harvest:**  
 late September

This CBD-rich strain consists of a genetic coming from the USA and it is the result of the cross between one of the most famous and outstanding American strains, a Chemdawg and a CBD-rich European genetic of American ancestors from the Diesel family. The THC:CBD ratio of this strain stands between 1:1 and 1:2, making it a strain rich in CBD (cannabidiol). The tastes and aromas of this strain are delicious and typically American, very intense and loaded with some shades of aromas, with sweet and woody tones, a touch of lemon and shades of aromatic peppers and spices, with an outlying but delicious background that stands beyond the characteristic aroma of the Diesel family. The plants grow with the appearance of an indica-sativa hybrid with indica predominance, with a big main cola and generous production of side branches, creating large and dense plants with an abundant bud production. This strain produces a colossal amount of highly aromatic resin, excellent for extractions.

LEGAL WARNING: Cannabis seeds are not regulated under the Single Convention on Narcotic Drugs, 1961, signed in New York on 30 March, 1961, as amended by the Geneva Protocol of 25 March, 1972, and ratified by the Spanish state. The Single Convention sets out which part or parts of the Cannabis sativa L. plant are regulated; the flowering or fruiting tops of the cannabis plant, as well as the resin obtained from the cannabis plant, but explicitly excludes the seeds. The seeds, therefore, do not form part of the legal concept of cannabis and are omitted from the Convention's Schedules. Cannabis sativa L. seeds do not contain the active substance delta-9-tetrahydrocannabinol (THC). Consequently, in accordance with the Single Convention, the seeds of the cannabis plant are neither regulated nor can they be classified as narcotic drugs. In Spain, the sale, possession and cultivation of cannabis seeds for personal use does not constitute a criminal offence. The Spanish Criminal Code classifies the cultivation of cannabis in order to promote, encourage or facilitate its consumption by third parties as a criminal offence. According to Spanish Supreme Court Public Prosecutor, Fernando SEQUEROS SAZATORNIL, the sale of cannabis for domestic cultivation in quantities apt for its personal consumption and self-supply for the same purpose (including the seeds reproduced from the plants) cannot, in any way, be considered to constitute a criminal offence. The cultivation of cannabis for personal use may constitute an administrative offence pursuant to Article 36.18 of Organic Law 4/2015, of 30 March, on the protection of public safety, if conducted in locations visible to the public. The seeds sold by Sweet Seeds, S.L. are sold for personal use exclusively by adults over 18 years old. Sweet Seeds, S.L. markets the cannabis seeds as items intended for collection or genetic conservation with the specific restriction that they must not be used for any purposes that contravene current legislation. According to the principle of mutual recognition, the European Union Member States may not prohibit the sale on their territory of goods which are lawfully marketed in another Member State, even when those goods have been produced in accordance with different technical rules (Regulation (EU) 2019/515, of 19 March 2019, on the mutual recognition of goods lawfully marketed in another Member State). National laws applicable to cannabis seeds vary greatly between countries. In some, the germination and cultivation of cannabis for personal use, and even the mere possession of the seeds, may constitute a criminal offence. Sweet Seeds, S.L. does not want to incite anyone to violate a current law in their country. Therefore, we urge purchasers who are not resident in Spain to familiarise themselves with applicable local legislation. Sweet Seeds S.L. encourages its customers to act responsibly. Sweet Seeds S.L. accepts no liability for potential legal problems which could arise for purchasers and will not issue a refund for seeds confiscated or refused by the shipping agent or customs service while fulfilling their duties. The fact that some of the descriptions allude to the effects of consumption does not, under any circumstances, mean that they should be consumed, as they are merely informative descriptions. Sweet Seeds S.L. accepts no liability for any decisions the purchaser may take based on this information due to possible typographical errors contained within the documents and graphics on the website or derived from the misuse of the seeds. The information is subject to periodic changes in its content which may be added to, improved, corrected or updated without notice.
